I was searching over the internet for how to perform the new cool android data-binding over the RadioGroup and I don't find a single thing about it.

As a simple scenario, based on the radio button selected, I want to attach a callback event using android data binding. I don't find any method on the xml yet which allows me to define a callback.

Like here is my RadioGroup:

```
<RadioGroup
        android:id="@+id/split_type_radio"
        android:layout_width="match_parent"
        android:layout_height="wrap_content"
        android:layout_marginBottom="20dp"
        android:checkedButton="@+id/split_type_equal"
        android:gravity="center"
        >>>>
```
